

Installing the Intel oneAPI Fortran compiler

Thierry Van Cutsem

April 2021

(Updated by Bastien Ewbank

July 2026)

Downloading

There are **4** packages to download from Microsoft and Intel Web sites.

1. Microsoft Visual Studio 2022
2. Intel oneAPI Base Toolkit
3. Intel oneAPI HPC Toolkit
4. Intel Fortran Compiler Classic Runtime for Windows

URAMES relies on a deprecated Fortran compiler whose development and maintenance ended in early 2025. As of 2026, Intel appears to have restricted access to this older version. That is why a copy of the three packages you need, provided by Intel, is available here:

https://drive.google.com/drive/folders/1De5GXrf92R2CLCdGwc4haqDTNzcNxo_3?usp=sharing

Microsoft Visual Studio 2022 is maybe already installed by default on your computer, or the installer executable may already be present. Search in your task bar search field. If you still need to download it here is the [website link](#) (in French)

Old/deprecated download Intel links if you prefer to look by yourself :

- [Intel oneAPI Base Toolkit](#)
- [Intel oneAPI HPC Toolkit](#)
- [Intel Fortan Compiler Classic Runtime for Windows](#)
-

Installing

For installation simply run (double-click) the .exe packages, in the following order:

1. Microsoft visual studio. Select the workload "Desktop development with C++"
2. oneAPI Base Toolkit (w_BaseKit_p_2024.2.1.101_offline.exe)
3. oneAPI HPC toolkit (w_HPCKit_p_2024.2.0.633_offline.exe)
4. Fortran runtime libraries for oneAPI (w_ifort_runtime_p_2024.2.1.1084.exe)

Select the 'recommended Installation' and 'integrate to Microsoft Visual Studio' for the 3 Intel installation.
